iFD mSTORE

THE MOBILE DATA ENTRY SOLUTION IN WAREHOUSING

iFD mSTORE is a mobile MDE solution for the automation of all IT-based processes in warehousing, extending the functionality of the ERP system, communicating intensively with the ERP system and updating important data right away. Using this tool makes it easier to control the flow of goods by having more real-time data available, and increases your just-in-time overview.

iFD mSTORE is the mobility solution used in warehouse management to support and extend the ERP functions with mobile devices into the warehouse and even to the shipping of goods. **iFD mSTORE** acts as a "extended arm" of the ERP system into the warehouse by offering precise and compact functions to simplify the workflows in the warehouse, for example receiving goods, packing, picking, relocation, tracking, label printing and inventory control – besides other functions.

MDE for retail / wholesale and warehousing. Efficiency in Mobility

Mobile Data Entry functions often have a major impact on various areas in a company, either directly or indirectly.

Starting at goods receiving and precise workflows in this area, availability often has a direct impact on picking quality and the delivery quality. Correct and just-in-time processes optimizes the picking times and should result in a reduction in workflow cost. A planned electronic process of goods relocation also may have a significant impact on shipping speed, besides various other impacts, including optimization in tracking of lots.

iFD mSTORE is the practical and easy to use solution for all processes in warehouse and logistics automation.
